1. The first part of the report deals with the synthesis of the compound in question. The starting material was purified by distillation and the reaction was carried out under anhydrous conditions. The product was obtained in a yield of approximately 80% and was purified by recrystallization from hexane. The melting point of the pure compound was found to be 120-121°C.

2. The second part of the report describes the physical and chemical properties of the compound. The compound is a colorless, crystalline solid that is soluble in a variety of organic solvents. It is stable to air and light. The infrared spectrum shows characteristic absorption bands at 1715, 1640, and 1510 cm⁻¹. The mass spectrum shows a molecular ion peak at m/e 182.

3. The third part of the report discusses the structure of the compound. The molecular formula is C₁₀H₈O₂. The structure is consistent with the observed physical and chemical properties and the spectroscopic data. The compound is believed to be a dimer of a five-membered ring containing two oxygen atoms.

FUNDAMENTOS

La ciudad de Ushuaia ha crecido desmesuradamente en los últimos años sin una planificación adecuada por lo que a cada momento surgen inconvenientes de infraestructura de servicios de vital importancia para las familias radicadas.--

Este hecho se repite sistemáticamente en los Barrios periféricos de las ciudades del Territorio, y por supuesto no escapa a esta situación el Barrio Pista de / Esquí de la ciudad de Ushuaia.--

Para casos de emergencia se torna de extrema urgencia la instalación de un teléfono público en el mencionado barrio, así como también una sala de Primeros Auxilios para atender los requerimientos y las necesidades de las familias allí instaladas, que sea menester darle un tratamiento urgente en el aspecto de la salud de los vecinos.--
